PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience in building scalable web applications and microservices using React, Node.js, and event-driven architectures. Skilled in designing secure, production-grade APIs, distributed systems, and AI-powered solutions (RAG pipelines). Experienced in translating business requirements into scalable system designs with a strong focus on performance, security, and reliability.

PROFESSIONAL EXPERIENCE

- Software Engineer** | *GFX Technologies Next.js, Typescript, BigQuery, RAG, AI Pipelines* Aug 2025 – Present
- Owned end-to-end design and development of secure RESTful APIs using Node.js and TypeScript for product ingestion, search, and seller workflows, reducing manual frontend dependency by 60
 - Designed and implemented a Retrieval-Augmented Generation (RAG) pipeline leveraging embeddings and vector search to answer seller queries, improving response relevance and reducing support overhead.
 - Translated business requirements into scalable backend architectures, implementing data validation, caching strategies, and rate limiting to ensure high performance under concurrent traffic.
 - Built production-grade APIs with a strong focus on secure coding practices, reliability, and system scalability.

SKILLS & CERTIFICATIONS

Programming Languages: C/C++ (OOP), JavaScript, TypeScript, Python, SQL, Java (Basic)
Frameworks & Libraries: React.js, Next.js, Node.js, Express.js, Spring Boot (Basic)
Backend & Architecture: RESTful APIs, Microservices Architecture, Event-Driven Systems, WebSockets
Databases: PostgreSQL, MySQL, MongoDB
Cloud & DevOps: Docker, Firebase, GCP, CI/CD (GitHub Actions - basic)
Security & Practices: Secure Coding, Rate Limiting, API Authentication (JWT, HMAC), Data Validation
Tools: Git, REST APIs, Redis, RabbitMQ, GenAI

PROJECTS

- PayFlow(Payment Processing Platform)** | *Node.js, Express, PostgreSQL, RabbitMQ, Docker* Feb 2026 - Present
- Designed a multi-tenant, microservices-based payment processing platform with API key authentication and deterministic state machine for reliable transaction handling.
 - Built an event-driven architecture using RabbitMQ to enable asynchronous workflows, background processing, and resilient webhook handling.
 - Implemented secure, production-grade integrations using HMAC authentication, Redis-based rate limiting, and audit logging for traceability and fraud prevention.
 - Developed scalable caching and analytics systems using Redis with event-driven cache invalidation.
- Intelli-Review(AI Code Review Assistant)** | *Docker, Next.js, Node.js, Python, PostgreSQL* June 2025-Dec 2025
- Engineered a microservices-based system to automate GitHub PR reviews using AI, reducing manual effort by 50%.
 - Designed event-driven architecture with RabbitMQ for reliable processing under high load.
 - Built full-stack dashboard with Next.js and PostgreSQL integrating GitHub OAuth and automation workflows.

EDUCATION

Chandigarh University, Punjab September 2021 – June 2025
Bachelor's of Engineering in Computer Science

ACHIEVEMENTS

- 4* Coder in C++** | *Hackerrank* Aug 2022 - Present
- HackerRank C++ 4-star rating, solved 200+ DSA problems with a 90%+ success rate, ranking in the top 10% globally
- Solved 300+ DSA Problems** | *Leetcode and Coding Ninjas* Aug 2022 - Present
- Completed 300+ DSA problems across challenging platforms like LeetCode and Coding Ninjas, refining time/space optimization strategies for real-world applications
